

China ST Pigtail Fiber

Article Overview

ST Fiber Optical Pigtails from China are pre-terminated fiber assemblies designed for reliable splicing and network connections, available in single-mode and multimode types with low insertion loss and high return loss.

Overview

An ST fiber optic pigtail is a short fiber cable with an ST connector pre-installed on one end and a free, unterminated end for splicing or termination to other fiber components. These pigtails are widely used in telecommunications, data centers, FTTH networks, and patch panels, providing efficient and stable optical signal transmission .

Key Features

- **Connector Type:** ST (bayonet-style coupling) ensures a secure and reliable connection, compatible with both single-mode and multimode fibers .
- **Fiber Types:** Single-mode (OS2) and multimode (OM3, OM4, OM5) options are available, supporting various network requirements .
- **Performance:** Low insertion loss (50 dB) for clean signal transmission .
- **Length and Configuration:** Typically 3 meters long, with options for 6 or 12 fiber arrays, color-coded for easy identification .
- **Termination Flexibility:** The free end allows fusion splicing or mechanical connector termination, making it adaptable to different network setups .
- **Industry Standards:** Designed for interchangeability and compliance with global fiber optic standards, ensuring compatibility with existing systems .
