

Console connection to fiber optic switch

Overview

Log in to the switch: Use Console, Telnet or SSH to access the CLI. Enable the port: Enter the corresponding port view and use commands such as `undo shutdown` or `no shutdown`. Configure speed and duplex: If auto-negotiation fails, manually set the same speed and full-duplex mode. I am trying to run a long console line with switches and fiber/ethernet for connectivity. This works! This blog post guides you through the steps of accessing your Cisco switch via the console port and connecting your PC – a crucial first step for configuration and management. Console Cable: A cable with RJ-45 (looks like a phone jack) on. The multi-fiber push on (MPO) connector is a 12-fiber optical connector with a footprint similar to the SC simplex connector. The MPO connector conforms to the TIA/EIA-604-5 intermateability standard. It is used for establishing 40G and 100G optical parallel connections. MPO-12. Sikandar Shaik (CCIE#3) shows you how to connect to Cisco devices using a console cable.
