

Core switch price 1 36TB

Article Overview

High-performance core switches with capacities around 1.36TB typically range from \$20,000 to over \$100,000 depending on vendor, port density, and features.

Pricing Overview

Core switches are designed for high-throughput, enterprise, and data center networks, and their prices vary significantly based on specifications such as throughput, modularity, and port count. For example:

- Cisco Catalyst 9600 Series offers advanced routing, Layer 2/3 switching, and high availability features, with prices often starting around \$25,000–\$50,000 for base models and increasing for higher-capacity configurations .
- Huawei CloudEngine S12700E series provides modular options with up to 288 x 100GE ports, suitable for large-scale networks, with pricing typically in the \$30,000–\$100,000+ range depending on the number of modules and ports .
- Stackable 100G switches from vendors like Ruijie or generic high-performance models can be found on platforms like Alibaba, with competitive pricing starting around \$15,000–\$40,000 for smaller configurations .

Factors Affecting Price

- Throughput and Capacity: Higher aggregate bandwidth (e.g., 1.36TB switching capacity) increases cost.
- Port Density: More 10GE, 25GE, 40GE, or 100GE ports raise the price.
- Modularity: Modular switches that allow future expansion are more expensive than fixed-port models.
