

Customization Process for 8-Core Fiber Optic Fast Connectors for FTTH

Article Overview

The customization of 8-core FTTH fast connectors involves a structured six-stage process from requirement analysis to after-sales support, ensuring tailored solutions with high reliability and rapid field deployment.

Overview of FTTH Fast Connectors

FTTH fast connectors are field-installable, pre-polished fiber optic connectors designed to simplify and accelerate fiber termination without the need for fusion splicing, epoxy, or polishing equipment. They provide low insertion loss, stable optical performance, and high mechanical strength, making them ideal for last-mile fiber deployments. These connectors can be terminated quickly using simple tools, reducing labor costs and deployment time.

Key Customization Considerations

When customizing 8-core fast connectors, several parameters can be tailored:

- Connector Type: LC, SC, ST, or other industry-standard interfaces.
- Polarity: Type A, B, C, or fully customized to match network design.
- Fiber Mode: Single-mode or multimode fibers depending on network requirements.
- Cable Structure: Sheath material, buffer type, and flame retardant grade (e.g., CPR level, IEC60332, UL standards).
- Connector Pin Configuration: Male (with pin) or female (without pin) options.
