

Does a multi-channel relay module include an optocoupler

Overview

The module comes with the optocouplers, which enables input of the module to operate from on a supply other than the one used by the module. It is useful in high load and high noise environment. These 5V multi-channel relay modules are convenient devices for controlling an external load using low power/low voltage devices such as an Arduino. Additionally, there is a jumper-based. This 5V 2 Channel Relay has 2 separate relays. 50V AC / 5A or 30V DC / 5A each. ✓ Likewise, the module is equipped with large-size. The 2 Channel 5V Relay Module with Optocoupler is a versatile component designed to control high-power devices with low-voltage signals, making it ideal for various automation and control applications.
