

Fiber optic adapter duplex simplex

Overview

What is the difference between simplex and duplex adapters?

A simplex adapter holds one connector pair (one fiber channel). A duplex adapter holds two connector pairs side by side in a single housing, saving panel space and simplifying cable management for dual-fiber. We offer many types of fiber adapters – for simplex or duplex cable; made of plastic or metal; single mode or multimode; with connector types such as FC, LC, SC, ST, MU, SMA-905 and SMA-906; and in rectangular, square, or circular mounts. These provide a reliable connection between connectors of the same type or hybrid, without unnecessary splicing or modifications. When it comes to SC/APC connectors, used for single-mode fiber applications. The LC Simplex & Duplex Adapter is a versatile and compact solution designed for fiber optic connectivity, supporting both simplex (single fiber) and duplex (two fibers) LC connectors. It is compatible with both multimode fiber optic cables, making it ideal for a wide range of networking. Get low-loss fiber optic adapters/couplers with good repeatability and durability for precisely mating two ends of a fiber optic cable. Multiple connector options available.
