

Function of Indoor Terminal Box

Overview

Terminal boxes keep your electrical connections safe and organized, helping prevent hazards and making sure everything runs efficiently. They use advanced materials that stand up to tough environments and offer flexible designs for different setups. An Access Terminal Box (ATB), also known as a fiber access socket or fiber pizza box, is an indoor optical connection device used to link fiber drop cables with the optical distribution network (ODN). It integrates a splice tray, pre-terminated drop cables (1, 2, 4, or 8 fibers), fiber patch cords. Access terminal boxes, or fiber optic terminal boxes or fiber distribution boxes, are essential components in fiber optic communication networks. It's often the bridge between chaos and control in wiring.
