

# How much does it cost to replace a photovoltaic module

## Article Overview

Replacing a single photovoltaic module typically costs between \$120 and \$200 for the panel itself, with total replacement costs higher when including installation.

### Module Price

The cost of a solar panel depends on its type and efficiency. Premium monocrystalline panels generally cost \$0.30 to \$0.50 per watt, meaning a standard 400-watt panel would range from \$120 to \$200. Less efficient polycrystalline panels are cheaper, around \$0.25 per watt. Global wholesale prices for modules vary from \$0.08 to \$0.28 per watt, influenced by technology, origin, and regional market conditions.

### Installation and Replacement Costs

Replacing a module is not limited to the panel price. Installation labor, electrical connections, and potential roof work can add significantly to the cost. For residential systems, modules typically account for less than 20% of the total system cost, so a single-panel replacement may involve \$200–\$400 or more when including labor and materials. Costs can vary by location, roof complexity, and installer rates.

### Factors Affecting Cost

- Panel type and efficiency: Higher efficiency panels cost more but may provide better long-term performance.
- System size and configuration: Larger or integrated systems may require additional adjustments when replacing a module.
