

How to install a pole for a distribution box

Article Overview

Install a distribution box on a pole by selecting a safe, accessible location, securing the box with appropriate brackets or enclosures, connecting wires correctly, and performing safety tests.

Step 1: Select the Installation Location

Choose a location on the pole that is easily accessible for maintenance, close to the main power supply, and away from water, flammable, or corrosive substances. Ensure the area allows for ventilation and future expansion of the system. For outdoor installations, select a weatherproof enclosure with an IP66 or NEMA 4 rating to protect against rain and dust .

Step 2: Prepare the Pole and Mounting Hardware

- If the pole is not yet installed, consider pre-mounting the distribution box on the pole shaft to simplify installation and avoid damage during lifting .
- Use brackets, jacking lugs, or horizontal extension arms to secure the box. Ensure the mounting hardware can support the weight of the box and any attached cables .
- Align the box so it is level and stable, avoiding tilting or looseness .

Step 3: Wire Preparation and Connection

- Cut the insulation of wires to the required length, leaving enough exposed conductor for secure connections .
