

How to select the right type of wire and cable tray

Overview

Choosing the right cable tray type is essential and is usually specified by an engineer or project designer. Understand Your Cable Tray Requirements Before selecting a cable tray, consider the following key factors:.

Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. Selecting cable trays can feel overwhelming, especially with so many options available. But don't worry—I've got you covered. Whether you're dealing with power cables, control. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. At its heart, Cable Tray Design, Layout means choosing and setting up cable trays to hold and protect electrical and data cables.
