

How to set the IP address for APC smart PDU

Overview

By default, the APC AP7900 does not have an IP address assigned. Most servers still come with a built-in 9-pin serial port, but most desktops and laptops do not. If you don't have one, many vendors sell USB to. An APC Network Management Card must be configured with network settings before it can communicate on the network. Contact your network administrator to obtain valid TCP/IP settings. Connect the serial configuration cable that came with the Network Management Card or with the device that contains an embedded Network Management. This guide provides a step-by-step process for configuring the APC AP7900B, interwoven with personal anecdotes and insights into why this \$100-\$150 investment for a used unit is a must-have for home lab power management. You can manage a Switched Rack. The American Power Conversion (APC®) Switched Rack Power Distribution Unit (PDU) is a stand-alone, network-manageable device that monitors current and allows programmable control of eight, sixteen, or twenty-four power outlets (depending on the model). Access the Web interface using HyperText.
