

How to set the network speed of a standalone switch

Overview

Use the CLI to enter interface configuration mode (e., interface GigabitEthernet1/0/1) and set speed {10 | 100 | 1000 | auto} and duplex {half | full | auto}. Follow these simple best practices to set up a new network switch. But, with the. Effective switching is essential to handle the growing network traffic coming from video and other bandwidth-intensive applications, more user devices, and more packets headed to servers and storage in the cloud. "When you begin a cloud service, don't be surprised to see that you're pushing out 50. By default, Cisco switches will auto-negotiate the speed and duplex settings. You could opt for switches offering 10/100/1000 Gigabit ethernet or faster speeds for heavy-duty requirements. Monitoring and management: Managed vs. By following this guide, you will gain the knowledge and skills needed to configure a network switch. You can check the port speed on a Cisco network switch from its command-line interface (CLI) by logging into the switch and then issuing the show interface command.
