

# Installation of Multimedia Distribution Box in Southern Europe

## Article Overview

A Multimedia Distribution Box (MDB) should be installed with proper planning, structured cabling, and separation from electrical circuits to ensure reliable data and power distribution for at least 15–20 years.

### Planning and Placement

For new constructions, it is recommended to plan the multimedia cabling in advance, using a star-shaped or room-spanning layout to allow flexibility for future devices and services . The MDB is typically installed near the main electrical distribution board or in a dedicated utility room. In single-family homes, it can be combined with the meter cabinet or a small installation sub-distributor . Ensure the location allows easy access for maintenance and expansion.

### Equipment and Configuration

A modern MDB integrates internet, TV, and smart home systems in one enclosure. It should include:

- Patch panels and modular mounting plates for routers, switches, and media modules .
- Separate compartments for power and data to prevent interference, maintaining at least 200 mm distance between unshielded network cables and electrical wiring .
- Adequate space for future upgrades, typically a 3–5 row configuration for a single-family home .
