

Installation of the speaker head in the distribution box

Product parameters

Article Overview

Proper installation of a speaker head in a distribution box requires secure mounting, shielded Ethernet cabling with grounding, correct torque application, and verification of connections to ensure optimal performance and IP-66 protection.

Step-by-Step Installation Guide

1. Mounting the Bracket

- Unscrew the speaker from its mounting bracket and place the bracket at the designated location on the wall or ceiling.
- The speaker can be mounted horizontally or vertically depending on the space and coverage requirements.
- Use a low tightening torque (maximum 1.5 Nm) when securing the bracket to avoid damaging the material . 2. Attaching the Speaker
- Fasten the speaker to the mounting bracket carefully.
- Remove the back plate to access the cable entry points.

• Ensure the speaker is positioned at a height of 1.5–3 meters for optimal microphone and audio performance . 3. Wiring the Speaker

- Run a shielded Ethernet cable through the cable gland on the back plate.
- Terminate the cable with an RJ45 connector and insert it into the TKIS Kit Ethernet port.
