

Moveable Optical Cable Laying Stand

Article Overview

A Moveable Optical Cable Laying Stand is a portable cable drum roller system designed to support, guide, and rotate fiber optic or power cable reels efficiently during installation.

Overview and Purpose

A moveable optical cable laying stand, also known as a cable drum roller stand, is used to facilitate the installation of fiber optic cables, power cables, and other telecommunication lines. Its primary function is to support the cable drum, allow smooth rotation, and reduce friction during cable pulling, ensuring safe and efficient deployment in underground, duct, or overhead installations .

Key Components

- Turntable/Base Platform: Provides a stable foundation for the cable drum and allows rotation.
- Rollers and Roller Axes: Equipped with bearings to enable smooth rotation of the drum.
- Locking Fixtures: Secure the drum in place, especially on slopes or uneven surfaces.
- Adjustable Roller Bases: Can be modified to fit different drum diameters and widths .

Operation and Usage

- Place the stand on a stable surface and adjust the roller bases according to the drum diameter.
