

No response when optical port is plugged into electrical port module

Overview

Use an optical power meter to test the receive power of the port and check whether the optical fiber is disconnected. Use one optical fiber to form a loop on the port to check whether the port goes Up. Check whether the obtained information is the same as that on the optical module datasheet. Port not UP Taking 10G SFP+/XFP optical module as. Have you ever experienced an unexpected network outage due to the failure of an SFP/SFP+ optical transceiver?

Network outages can bring your ability to communicate and work to a halt, and your IT team will likely be frantically looking for a solution. These faults can affect network stability and, in severe cases, cause network interruptions, resulting in losses. Therefore, it is important to be proficient in identifying and troubleshooting. The optical port of the ONU is a core, vulnerable component that enables optical-to-electrical signal conversion.
