

Price of copper busbars for household electrical distribution boxes

Article Overview

Copper busbar prices typically range from \$0.12 to \$0.22 per piece for high-volume insulated units, with costs influenced by size, material purity, customization, and certifications.

Pricing Overview

Copper busbar costs vary depending on material, dimensions, and application requirements. Standard high-conductivity copper (C11000) is commonly used, and prices are higher than aluminum due to superior conductivity and durability . For bulk orders, suppliers like Huizhou Wlj Tech offer insulated busbars at \$0.12–\$0.22 per piece, making them cost-effective for large-scale projects . Custom busbars, including specific lengths, bends, drilling patterns, or plating, generally incur higher costs due to design, tooling, and lower economies of scale .

Factors Affecting Cost

- **Dimensions and Cross-Section:** Larger cross-sections require more copper, increasing material costs. Laminated busbars range from 25 mm² to 1200 mm², with thicknesses from 0.5 mm to 10 mm .
- **Insulation and Plating:** Insulated or tin/silver-plated busbars improve safety and conductivity but add manufacturing complexity .
- **Certifications:** UL, IEC, CE, and RoHS compliance can affect pricing, especially for industrial or international applications .
