

Price of mobile data center cable trays

Article Overview

Mobile data center cable trays typically range from \$0.80 to over \$76 per unit, depending on material, size, and supplier.

Pricing Overview

The cost of cable trays varies significantly based on material, design, and purchase volume. For industrial and data center applications:

- B2B bulk pricing (e.g., Alibaba) ranges from \$0.80 to over \$76 per tray, with higher prices for stainless steel, hot-dip galvanized, or specialized high-load trays suitable for data centers .
- B2C retail pricing (e.g., Amazon) is generally \$15 to \$34 per tray, designed for smaller-scale or office setups .

Material and Type Considerations

Different materials and designs affect both price and performance:

- Aluminum alloy trays: Lightweight, corrosion-resistant, suitable for moderate loads (~150 kg/m) in mobile data centers .
- Galvanized steel trays: Heavier, more durable, can support up to 300 kg/m, ideal for high-density cabling .
- Stainless steel (304/316): High corrosion resistance, long-lasting, often used in critical or outdoor environments .
- Wire mesh or perforated trays: Allow better airflow, reduce heat buildup, and are easier to manage in high-density setups .
