

Price of welded lap-lock cable trays

Article Overview

The price of welded lap-lock cable trays varies widely depending on material, size, load capacity, and finish, typically ranging from \$20 to \$100 per meter for standard steel options.

Factors Affecting Price

- **Material Type** Welded lap-lock cable trays are commonly made from pre-galvanized steel, hot-dip galvanized steel, or stainless steel. Stainless steel trays are more expensive due to corrosion resistance and durability, while pre-galvanized steel is more cost-effective for indoor applications .
- **Tray Dimensions and Load Capacity** The width, depth, and rung spacing of the tray influence the price. Wider trays or those designed to carry heavier cable loads require more material and stronger welding, increasing cost .
- **Finish and Coating** Protective coatings such as hot-dip galvanization or powder coating add to the price but improve longevity, especially in outdoor or corrosive environments .
- **Manufacturing Method** Welded lap-lock trays produced using robotic welding systems offer higher structural strength and precision, which can increase the unit cost compared to manually welded or swaged trays .
- **Length and Customization** Standard lengths are usually 3 meters, with optional 6-meter sections available. Custom lengths, bends, or accessories like covers and fittings will increase the overall cost .
