

The cost of the three-level distribution box is in the budget

Overview

The average cost to replace the septic d-box is \$1,175. On the high end, you could spend up to \$1,800, which includes a larger distribution box, longer labor and a permit. A precision distribution cabinet is not a fixed-price product like a simple wall box. It is an engineered low voltage power distribution system. The final price depends on rated current, outgoing circuit count, breaker brand. When you start looking for a distribution box, you'll quickly realize the price range is wider than a highway. You might find a small plastic unit for the price of a fancy dinner, or an industrial-grade stainless steel beast that costs as much as a compact car. For industrial or commercial use, choose an enclosure type (NEMA 4X for outdoor/wet environments) that matches your. The outgoing line from the low-voltage end of the transformer is 0. 4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the distribution box (secondary distribution box) in each building, and finally the outgoing line is led to the distribution cabinet. The total cost for a professional to replace a septic distribution box typically ranges from \$600 to \$2,000, with the average project costing around \$1,175.
